RITESH GHARTI

riteshgharti333@gmail.com | LinkedIn | GitHub | Portfolio

Technical Skills

Languages: C++, JavaScript, TypeScript, HTML/CSS
Frameworks/Libraries: React.js, Next.js, Node.js, Express.js, Redux, Material-UI, Tailwind CSS
Databases/Cloud: MongoDB, PostgreSQL, Redis, Supabase, AWS S3, Cloudinary
Tools/Architecture: RESTful APIs, CI/CD, Git, GitHub, Postman, Prisma, Vitest, k6

Experience

Tech Lead / Software Engineer January 2026 – Present
Twipra Technology *Hybrid, Full-time*

- Led end-to-end delivery of client products, owning scoping, architecture, development, launch, and handover.
- Led technical design, project planning, and technology decisions, balancing scalability, performance, and client budget.
- Architected full-stack platforms with backend APIs, database design, and admin dashboards for business operations.
- Authored proposals, cost estimates, and technical documentation; presented architecture and feasibility to clients.

Full Stack Developer January 2025 – December 2025
Star Marketing *Remote, Full-time*

- Delivered **9+** web applications independently, including full-stack, frontend, and domain-specific projects across hospital, academic, marketing, printing, taxi service, and wedding industries.
- Engineered performance optimizations including **Redis caching**, **lazy loading**, and **image compression**, significantly reducing load times across projects.
- Streamlined releases using **CI/CD** (GitHub Actions) with deployments on **Vercel**, **Render**, and **cPanel**.
- Maintained **90% client satisfaction** across all live deployments through iterative feedback and agile delivery cycles.
- Drove an estimated **40–50% revenue growth** through rapid delivery of scalable client-driven web solutions.

Full Stack Developer Intern January 2024 – July 2024
Future Finders *Remote, Internship*

- Built full-stack applications by implementing end-to-end features across the frontend, backend, and database.
- Expanded expertise in **Next.js**, authentication, session management, backend architecture, and full-stack development.
- Mentored fellow trainees on **UI design**, **debugging**, and full-stack concepts, supporting a collaborative environment.

Projects

Medi Care

- Architected a hospital management system with RBAC, JWT, bcrypt, **18+ relational models**, and **15+ APIs**.
- Optimized API performance via dual-layer caching, cutting latency from **∼1.5s to ∼100ms** across **1M+ records**.
- Implemented PostgreSQL full-text search with Redis, reducing query times from **4–8s to <150ms** (**40x+ faster**).
- Designed a monorepo with **33 shared Zod schemas**, eliminating type drift and cutting builds by **40–50%**.
- Created a React frontend with **51 pages**, **39 reusable components**, and **16 custom hooks** using TanStack Table.

AiInvo

- Engineered a **Groq-powered AI invoice assistant** that generates invoices in one step from plain-text prompts.
- Architected a TypeScript monorepo with **70+ REST APIs** across 11 **Prisma** models with indexed relations.
- Secured API with **JWT HTTP-only cookies**, RBAC, Helmet, Zod validation; tested against SQL injection and XSS.
- Implemented **payment integrity** logic preventing overpayments and auto-syncing invoice status across transactions.
- Automated **email and WhatsApp** reminders for due, overdue, and expiring invoices, with duplicate-send protection.
- Established **CI/CD** with GitHub Actions running lint, type-checks, **280+** Vitest tests; added k6 load scenarios.

International Academy of Design

- Architected a college web app with **23 API modules** and **19 MongoDB models** powering academic workflows.
- Built an automated Multer–Sharp–Cloudinary image pipeline, reducing image payload sizes by **∼90%**.
- Developed a zero-disk certificate generation system, cutting render time from **777ms to <100ms** (**87% faster**).
- Created dual React applications (frontend + admin) enabling centralized academic management and operations.

Education

Bahra University Solan, H.P, India
BCA (Bachelor of Computer Applications) ***CGPA: 8.27/10*** June 2021 – June 2024
Course Work: Data Structures and Algorithms, Object Oriented Programming, Computer Networks, Operating Systems, DBMS
